## Introduction

This volume presents blind peer reviewed academic papers for  
the 10<sup>th</sup> World Conference on Computers in Education  
learning while we are connected

The papers are arranged thematically and cover 11 of the 12 conference themes. Not surprisingly, the theme 'Researching ICT in education' is the theme that is most strongly represented. Even in that theme, however, it is possible to see the very large range of areas that cover our dynamic and challenging discipline. The papers contained in this volume further represent this variety.

The thirty-one papers presented in this volume are representative of the truly international nature of this conference. Even though they only make up 54% of the submitted papers for this category, they still represent seventeen different countries.

The papers presented in this volume, no matter which theme they belong to, are about learning and teaching. They are not about tools and programs they are about how those tools and programs support learning and teaching in the 21<sup>st</sup> Century.

We believe that these papers are representative of the very nature of TC3; a rich, diverse and forward thinking group of researchers and practitioners.
